Preface	xii
1 Math review	1
1.1 Some sets	1
1.2 Pairs of reals	3
1.3 Exponentials and logs	4
1.4 Some handy functions	5
1.5 Summations	6
1.6 Strings	8
1.7 Variation in notation	9
2 Logic	10
2.1 A bit about style	10
2.2 Propositions	11
2.3 Complex propositions	11
2.4 Implication	12
2.5 Converse, contrapositive, biconditional	14
2.6 Complex statements	15
2.7 Logical Equivalence	16

2.8	Some useful logical equivalences	18
2.9	Negating propositions	18
2.10	Predicates and Variables	19
2.11	Other quantifiers	20
2.12	Notation	22
2.13	Useful notation	22
2.14	Notation for 2D points	23
2.15	Negating statements with quantifiers	24
2.16	Binding and scope	25
2.17	Variations in Notation	26
3	Proofs	27
3.1	Proving a universal statement	27
3.2	Another example of direct proof involving odd and even	29
3.3	Direct proof outline	30
3.4	Proving existential statements	31
3.5	Disproving a universal statement	31
3.6	Disproving an existential statement	32
3.7	Recap of proof methods	33
3.8	Direct proof: example with two variables	33
3.9	Another example with two variables	34
3.10	Proof by cases	35
3.11	Rephrasing claims	36
3.12	Proof by contrapositive	37
3.13	Another example of proof by contrapositive	38

4	Number Theory	39
4.1	Factors and multiples	39
4.2	Direct proof with divisibility	40
4.3	Stay in the Set	41
4.4	Prime numbers	42
4.5	GCD and LCM	42
4.6	The division algorithm	43
4.7	Euclidean algorithm	44
4.8	Pseudocode	46
4.9	A recursive version of gcd	46
4.10	Congruence mod k	47
4.11	Proofs with congruence mod k	48
4.12	Equivalence classes	48
4.13	Wider perspective on equivalence	50
4.14	Variation in Terminology	51
5	Sets	52
5.1	Sets	52
5.2	Things to be careful about	53
5.3	Cardinality, inclusion	54
5.4	Vacuous truth	55
5.5	Set operations	56
5.6	Set identities	58
5.7	Size of set union	58
5.8	Product rule	59
5.9	Combining these basic rules	60

5.10	Proving facts about set inclusion	61
5.11	An abstract example	63
5.12	An example with products	64
5.13	A proof using sets and contrapositive	65
5.14	Variation in notation	66
6	Relations	67
6.1	Relations	67
6.2	Properties of relations: reflexive	69
6.3	Symmetric and antisymmetric	70
6.4	Transitive	71
6.5	Types of relations	73
6.6	Proving that a relation is an equivalence relation	74
6.7	Proving antisymmetry	75
7	Functions and onto	76
7.1	Functions	76
7.2	When are functions equal?	78
7.3	What isn't a function?	79
7.4	Images and Onto	80
7.5	Why are some functions not onto?	81
7.6	Negating onto	81
7.7	Nested quantifiers	82
7.8	Proving that a function is onto	84
7.9	A 2D example	85
7.10	Composing two functions	86

7.11 A proof involving composition	87
7.12 Variation in terminology	87
8 Functions and one-to-one	89
8.1 One-to-one	89
8.2 Bijections	91
8.3 Pigeonhole Principle	91
8.4 Permutations	92
8.5 Further applications of permutations	93
8.6 Proving that a function is one-to-one	94
8.7 Composition and one-to-one	95
8.8 Strictly increasing functions are one-to-one	96
8.9 Making this proof more succinct	97
8.10 Variation in terminology	98
9 Graphs	99
9.1 Graphs	99
9.2 Degrees	101
9.3 Complete graphs	102
9.4 Cycle graphs and wheels	102
9.5 Isomorphism	103
9.6 Subgraphs	105
9.7 Walks, paths, and cycles	106
9.8 Connectivity	107
9.9 Distances	108
9.10 Euler circuits	109

9.11	Bipartite graphs	110
9.12	Variation in terminology	112
10	2-way Bounding	113
10.1	Navigation	114
10.2	Pigeonhole point placement	114
10.3	Graph coloring	116
10.4	Why care about graph coloring?	117
10.5	Proving set equality	119
10.6	Variation in terminology	120
11	Induction	121
11.1	Introduction to induction	121
11.2	An Example	122
11.3	Why is this legit?	123
11.4	Building an inductive proof	124
11.5	Another example	125
11.6	Some comments about style	126
11.7	A geometrical example	127
11.8	Graph coloring	128
11.9	Postage example	130
11.10	Nim	132
11.11	Prime factorization	133
11.12	Variation in notation	134
12	Recursive Definition	136
12.1	Recursive definitions	136

12.2 Finding closed forms	137
12.3 Divide and conquer	139
12.4 Hypercubes	141
12.5 Proofs with recursive definitions	142
12.6 Inductive definition and strong induction	143
12.7 Variation in notation	144
13 Trees	145
13.1 Why trees?	145
13.2 Defining trees	148
13.3 m-ary trees	149
13.4 Height vs number of nodes	150
13.5 Context-free grammars	150
13.6 Recursion trees	156
13.7 Another recursion tree example	158
13.8 Tree induction	159
13.9 Heap example	160
13.10 Proof using grammar trees	162
13.11 Variation in terminology	163
14 Big-O	165
14.1 Running times of programs	165
14.2 Function growth: the ideas	166
14.3 Primitive functions	167
14.4 Proving a primitive function relationship	169
14.5 The formal definition	170

14.6 Applying the definition	170
14.7 Writing a big-O proof	171
14.8 Sample disproof	172
14.9 Variation in notation	173
15 Algorithms	174
15.1 Introduction	174
15.2 Basic data structures	174
15.3 Nested loops	176
15.4 Merging two lists	177
15.5 A reachability algorithm	178
15.6 Binary search	179
15.7 Mergesort	181
15.8 Tower of Hanoi	182
15.9 Multiplying big integers	184
16 NP	187
16.1 Finding parse trees	187
16.2 What is NP?	188
16.3 Circuit SAT	190
16.4 What is NP complete?	192
16.5 Variation in notation	193
17 Proof by Contradiction	194
17.1 The method	194
17.2 $\sqrt{2}$ is irrational	195
17.3 There are infinitely many prime numbers	196

17.4 Lossless compression	197
17.5 Philosophy	198
18 Sets of Sets	199
18.1 Sets containing sets	199
18.2 Powersets and set-valued functions	201
18.3 Partitions	202
18.4 Combinations	204
18.5 Applying the combinations formula	205
18.6 Combinations with repetition	206
18.7 Identities for binomial coefficients	207
18.8 Binomial Theorem	208
18.9 Variation in notation	209
19 State Diagrams	210
19.1 Introduction	210
19.2 Wolf-goat-cabbage puzzle	212
19.3 Phone lattices	213
19.4 Representing functions	215
19.5 Transition functions	215
19.6 Shared states	216
19.7 Counting states	219
19.8 Variation in notation	220
20 Countability	221
20.1 The rationals and the reals	221
20.2 Completeness	222

20.3 Cardinality	222
20.4 Cantor Schroeder Bernstein Theorem	223
20.5 More countably infinite sets	224
20.6 $\mathbb{P}(\mathbb{N})$ isn't countable	225
20.7 More uncountability results	226
20.8 Uncomputability	227
20.9 Variation in notation	229
21 Planar Graphs	230
21.1 Planar graphs	230
21.2 Faces	231
21.3 Trees	232
21.4 Proof of Euler's formula	233
21.5 Some corollaries of Euler's formula	234
21.6 $K_{3,3}$ is not planar	235
21.7 Kuratowski's Theorem	236
21.8 Coloring planar graphs	239
21.9 Application: Platonic solids	240
A Jargon	243
A.1 Strange technical terms	243
A.2 Odd uses of normal words	244
A.3 Constructions	246
A.4 Unexpectedly normal	247
B Acknowledgements and Supplementary Readings	249
